

Neopan 100 PRESTO + D-76(1:1)

This film seems to be same for *ILFORD 100 DELTA* film. So the characteristic curve has gentle curve at the shadow part of the figure (lower left), and straight line (no shoulder) at the highlight part (upper right), it is typical character of single-emulsion-layer film. It has quite different structure and character for *400 PRESTO*.

Its tone reproduction ability is a likeness of *TMX*, but it is easier to obtain natural tone than *TMX*.

Dev.time(min)	Speed	Contrast Index	Gradient(\bar{G})
8	130	0.58	0.60
9	152	0.64	0.65
10	160	0.68	0.69
