

## Neopan 400 PRESTO + D-76(1:1)

**Neopan 400 PRESTO** is one of the most popular high speed film. The characteristic curve has sharp curve at the shadow part of the figure (lower left), and shoulder slightly at the highlight part (upper right). That is, tone of shadow part is hard and highlight is soft. Printing to General-use paper, such as **Oriental New Seagull** and **Ilford Multigrade**, you will obtain naturally black to white gradations image, because those papers have hard highlight tone and soft shadow tone. It resembles **Kodak Tri-X pan(TX)** very much. For **TX**, **PRESTO** is soft tone when developing same time. And then, the push-processing ability of **PRESTO** is better than **TX** because **PRESTO's** curve is more straightly.

Dev.time(min)	Speed	Contrast Index	Gradient( $\bar{G}$ )
8	482	0.42	0.48
10	529	0.51	0.55
